This application contains unpatentable generic compound claims of massive scope. See the benzamides on p. 139, first column of US Patent Publication 21002/0128255. Note that the compounds of the publication have the same utility.

Election of a single supported species is required. Applicants may present a compact supported subgenus of manageable scope, preferably patentably clear of the above publication.

Applicants are required to also elect a species of disease to be treated. This is because of the likelihood of unpatentability due to enablement for the wide range of diseases now encompassed.
